Interim Chief [X] Officer™
How The Cantellus Group Can Build Functionality

Technology governance is going mainstream.

Boards and C-Suites are being asked to broaden their focus again, to include AI in addition to the full range of cybersecurity and data protection practices. The uptick in commercial uses for AI and other frontier technologies has fueled a corresponding flow of technology governance principles and frameworks. Add to that a dizzying startup ecosystem offering technical solutions to test bias, enhance explainability, and provide audit metrics and other data and security functions.

Companies are urgently working to identify the internal human, technology, and structural resources they will need to efficiently and effectively manage this new environment and the new breed of issues surfaced by frontier technologies.

Scoping (even naming) these novel roles is tricky.

Highly experienced, credentialed and practical leadership– available on an interim, cost-effective and predictable basis.

Whether still defining and assessing your technology governance roles or facing needs while you search for permanent hires, our Advisors work to meet each client's unique business and technology profile.

What Cantellus Group Advisors Can Do:

Serve in the role on an interim basis

Integrate AI, cybersecurity and data strategies with other functions

Define and stand up:

- Role(s)
- Strategies and Priorities
- Budgets
- Internal teams and structures
- Technology governance or advisory councils

Train permanent hires in their role

Reduce to an ongoing maintenance/support role

Work with:

- Boards
- Operating, technology, marketing and manufacturing teams
- GC, HR, IR / PR, GR and Policy teams
- Data protection and cybersecurity teams
- Outside consulting and legal teams
- Recruiters for permanent hires

How you Benefit:

- Expanding your existing technology governance programs and capabilities with specific and tailored expertise

- Customizing actionable technology governance principles and maturity models to fit your work and organization

- Insights and action from experienced managers who can quickly recognize gaps and implement solutions

- Training both technical and non-technical workforce on technology governance issues and best practices

- Identifying effective resources in a crowded and dynamic field

- Enhancing customer and public trust by communicating technology governance frameworks and practices

- Diligence for frontier technology investments and acquisitions from a policy, regulatory and ESG perspective

- Tracking and preparing for regulatory developments in the US and around the world

Arrangements and fees are based upon the extent and breadth of the assignment.

- Immediate access to skilled teams
- Fixed cost, retainer
- Fixed term, renewable
